October 13, 2016

Workshop 1 : Policies & Strategies for Managing Digital Assets

(Matt Schultz, Ranti Junus)

Summary

Policies & Strategies for Managing Digital Assets

(Matt Schultz, Ranti Junus)

Summary

Need a break from tools and technology? Let's talk digital assets! What are they? How do we define them for our institution? More importantly, how do we dial-in their long-term care and stewardship? This workshop will explore these questions through both policy development and strategy formation. Workshop leaders will provide overview, facilitate discussion, and lead hands-on exercises. We'll send you out with some fresh ideas and next steps!

Specifically, attendees will have an opportunity to:

- Fine-tune and define the scope of digital assets for their own institution
- Analyse needs and solutions for their digital asset management
- Practice drafting policy or updating existing policy for digital assets

Please bring a copy (electronic or paper) of any existing policies that you refer to in your institutional role. We will be doing some group and individual writing. Pens and paper will be provided, but it can't hurt to bring extra.

Workshop 2: XML/XSLT

(Nicole Smeltekop, Robin Dean)

Summary

Do you have MARC data? Do you want to use it in a system that requires XML (like a digital repository or ArchivesSpace)? This is the workshop for you! Learn the basics of editing and reading XSL transformations and working with MarcEdit to transform your MARC data to XML.

This hands-on workshop will cover:

- Basic syntax of XML/XSLT
- Tools for working with XML/XSLT
- Using MarcEdit to transform MARC data to MODS, Dublin Core, EAD, etc.
- Editing XSLT stylesheets
- Real world examples XSLT in action

Please bring a laptop with [MarcEdit](#) and a text editor installed. For those unfamiliar with XML structure, please look over the [W3Schools tutorials on XML](#) prior to attending this workshop. Participants will be emailed a link to workshop materials prior to the event.
